The problem

- Unfortunately, the crypto sector continues to suffer from trust issues and bad actors. With the downfall of major stable coins, exchanges and staking programs in 2022, traders and investors alike continue to search for real and reliable sources of cash-yield.
- Yield programs often lockup your capital or have withdrawal restrictions.
- Inflation continues to erode the value of stagnant capital, at almost 8% a year. Beating it, safely, is a priority.
- Brokers will regularly stop hunt and change spread on traders, lure them in with excessive leverage and do what is necessary to ensure the house wins.
- Brokers regularly go under posing major counterparty risk.
- Double digit yield solutions either offer staking-based yield in illiquid tokens subject to major capital loss risk, or artificial sources of revenue that don't last.

Phoenix

- Phoenix is a highly secure, downloadable app for your PC or Mac that allows you to participate in the global trade of top decentralised currencies as a market maker, and earn real-time yield in USDC.
- Liquidity mining is a complex task, requiring solid understanding of smart contracts, technical analysis, fundamental analysis (including key macroeconomic data points) and risk management. Phoenix takes care of this for you, so you can earn passively.
- Choose from three risk-reward tiers, starting with low to high, generating between 7%+ to 20%+ dollar yield (APY). Yields can expand significantly beyond these levels, depending on volumes and newsflow.
- Earn fees every minute as you participate as a liquidity provider in a multi-billion-dollar crypto market, using a range of decentralised exchanges (DEX), at the touch of button. In fact, in periods of market distress, fees may rise exponentially, as volumes increase substantially. This is what makes Phoenix' liquidity mining unique as all of this happens at the touch of a button.

Risk Tiers

Depending on the risk-tier you choose, you can earn from 7%-20%+ USDC cash yield, every year. Fees earned accumulate every minute in real time and you can withdraw your capital and fees at any time. Yields can expand significantly beyond these levels, depending on volumes and news-flow.

Your exposure is to the prices of top cryptos, also known as "Gearing level". However, this price exposure can be hedged using our solutions, as well.

Minimum investment is \$1,000 indicating a low barrier to entry.

Ignite

Gearing: 0.3-0.5x on the downside and 0.3x on the upside.

Risk Rating: **High**

APY: 20%+

Cruise

Gearing: 0.2-0.4x on the downside and 0.3x on the upside.

Risk Rating: **Medium**

APY: 12%+

Buffer

Gearing: 0.1-0.2x on the downside and 0.3x on the upside.

Risk Rating: **Low**

APY: 7%+

Hedging

- Although none of our liquidity programs are leveraged, if you want to add further layers of protection to your liquidity mining portfolio, you can hedge capital risk using industrial strength shorting solutions.
- The team uses a major, well audited and highly liquid decentralized derivatives protocol to allow investors to activate short positions in order to hedge capital risk, in the event the value of top crypto currencies drops.

Team

The 20-strong (and growing) team is comprised of financial engineers from JP Morgan, Goldman Sachs, developers, marketers, testers and all experts in their respective fields. Their profiles can be viewed on the [Hatchworks VC website](#).

Risk factors

Market conditions

From a macroeconomic perspective, the economy remains vulnerable and the probabilities of a global recession is still high. This may affect the yield over time.

Impermanent loss

The price of your deposited assets may change compared to when you deposited them.

Regulations

Depending on the level of crypto regulation, certain global liquidity dexes could become vulnerable when regulation gets into play.
